Hiring Team

Product Analyst

CRED

Hyderabad, India

RE: PRODUCT ANALYST - APPLICATION

I am applying for the Product Analyst role at CRED. My background in SQL-driven analytics, funnel and cohort analysis, and product-metrics ownership aligns closely with what this role requires - and I am genuinely excited to apply these skills to CRED's user journey, payment funnel, and feature impact measurement challenges.

In my most recent role at Logistics Integrators, I owned the **end-to-end funnel analytics for the shipment lifecycle** - from order creation through dispatch, transit, and final delivery. I tracked stage-wise conversion rates, identified drop-off points, and surfaced TAT deviation patterns that the operations team then acted on. The structural parallels to CRED's product funnel are direct: multi-stage user journeys, conversion and drop-off tracking, TAT/latency measurement, and cohort-level patterns that disappear in aggregate data. In parallel, I ran **cohort-based analysis** on operational datasets to identify trends invisible at the aggregate level - the same method product teams use to understand retention, activation, and feature adoption.

On the technical side, I write **SQL (CTEs, window functions, aggregations)** daily for multi-table data extraction and analysis, build Python (Pandas) scripts for data transformation and automated reporting, and own Power BI dashboards tracking 10+ KPIs. I understand **A/B testing principles** - hypothesis framing, control and treatment splits, significance checks - and am ready to apply them rigorously in a product analytics toolchain. My dbt Fundamentals certification signals that I think beyond one-off queries toward data model integrity and reproducible analysis.

CRED is one of the most analytically rigorous product environments in Indian fintech, and I see this role as the right place to go deep on product metrics - moving from operational analytics into the user-behaviour and feature-impact questions that drive product decisions. I am fully open to relocating to Hyderabad and can start with short notice. I would welcome the chance to discuss how my funnel and cohort analytics experience can contribute to the CRED product team.

Warm regards,

Subham Joshi
