Re: Data Analyst - AI Interview Agents

I'm applying for the Data Analyst role at AI Interview Agents. I have first-hand familiarity with exactly the kind of data this platform generates: I customised career-ops, a Claude (Anthropic) powered hiring-evaluation pipeline, to score 370+ job descriptions against a multi-dimension rubric - tracking evaluation outcomes, conversion rates by archetype, and quality metrics across a candidate-facing workflow. The parallels to candidate performance metrics, hiring funnel efficiency, and platform usage analytics are direct.

My analytics work at Logistics Integrators covered the full stack this role requires: **KPI dashboards in Power BI** tracking 10+ metrics for senior management, **funnel and drop-off analysis** on operational journeys, statistical anomaly detection using SQL and Python, and automated reporting pipelines that I documented end-to-end. I coordinated with 3-5 cross-functional teams simultaneously and presented findings to both technical and non-technical stakeholders.

On the portfolio side, I've built cohort retention and RFM segmentation queries on 805K+ transactions, an A/B testing framework as part of my Google Advanced Data Analytics Certificate (7-of-7, May 2026), and a fraud detection scoring model on 284K records using Z-score and IQR methods - all applicable to the candidate scoring, experiment design, and platform quality monitoring this role involves.

I am a **fully remote worker**, an **immediate joiner**, and comfortable managing multiple analytical priorities independently. Happy to connect for a quick 15-minute call at your convenience.

Warm regards,

Subham Joshi
