Hiring Team

Akasa Air

Mumbai, India

Re: Data Analyst - Assistant Manager, Data Analytics (SNV/DA/1747650)

I am applying for the Data Analyst role at Akasa Air. Aviation operations and logistics operations share the same analytical challenges -- turnaround performance, delay root-cause analysis, load and capacity tracking, operational KPI monitoring. I have spent the last year doing exactly this work in a freight logistics environment, and the transition to aviation analytics is a direct one.

At **Logistics Integrators Pvt. Ltd.**, I built statistical anomaly detection on operational datasets (Z-score, IQR threshold alerting), owned Power BI dashboards tracking 10+ KPIs for senior leadership, drove ETL validation and data transformation workflows using Python and dbt, and led root-cause analysis on performance gaps across freight operations. The technical stack -- SQL, Python (Pandas, NumPy, SciPy), R (logistic regression, random forest, AUC 0.837), Power BI -- maps directly to your requirements. I also hold the **Google Advanced Data Analytics Professional Certificate** (7/7, May 2026).

What draws me to Akasa Air specifically: you are three years old, data-first by design, and building your analytics function from the ground up. That is the environment where someone with strong fundamentals and fast learning can have real impact -- not maintaining legacy dashboards, but building the measurement frameworks the airline will rely on for the next decade.

Portfolio at github.com/Zolow-kuni/data-portfolio. Available to relocate to Mumbai. Happy to connect for a 15-minute call.

Warm regards,

Subham Joshi
