## Cash Operations Hiring Team

Associate, Cash Operations  
BlackRock, Inc.  
Mumbai, India

### RE: ASSOCIATE, CASH OPERATIONS - APPLICATION

BlackRock's cash operations function is where data accuracy becomes a fiduciary responsibility - a discrepancy that would be a reporting inconvenience elsewhere is a risk event here. That is precisely the kind of environment where I want to work, and the discipline I have been building: owning the integrity of data from source to report, and treating reconciliation as a daily non-negotiable.

At Logistics Integrators, I owned the **data integrity and reconciliation workflow** across multiple reporting systems - validating, reconciling, and auditing ETL pipelines to maintain a single source of truth, and eliminating cross-system discrepancies before they reached business review. I led **root-cause analysis on operational exceptions** - isolating the upstream data issue, partnering with 3-5 cross-functional teams to validate the fix, and shipping corrective actions. The same exception-management discipline applies directly to cash position discrepancies and prime broker reconciliation.

The proof point I am most proud of is the **Financial Data Integrity Checker** I built independently: a 10-rule validation engine on real Microsoft financial records, 3-sigma outlier detection, 14 profit exceptions flagged, 100% data quality score. It is the same logic your team runs daily - just on a much larger book. SQL and Python are my primary tools; I am eager to add VBA to the stack.

I am open to relocating to Mumbai and available immediately. Happy to connect for a quick 15-minute call at your convenience.

Warm regards,

**Subham Joshi**
