Re: FBS Strategy Integration & Reporting Analyst - Application

I am applying for the Strategy Integration & Reporting Analyst role at Capgemini. The JD maps directly to what I have been doing for the past 1.5 years: building operational KPI reports, producing productivity and trend analyses for senior leadership, and automating recurring reporting workflows in Python and Power BI.

At **Logistics Integrators Pvt. Ltd.**, I owned weekly Power BI dashboards tracking 10+ KPIs across freight distribution -- the single source of truth for management. I produced standardised operational scorecards, led root-cause analysis on performance gaps across distribution segments, and automated reporting pipelines in Python to cut manual turnaround. This is the same loop your JD describes: measurement of distribution management initiatives, trending analysis of productivity and profitability, scorecard development, and need-based reporting.

On the technical side, your requirements list Python, Power BI, and SQL at entry level (1-3 years). All three are my primary tools. I hold the **Google Advanced Data Analytics Professional Certificate** (7/7 courses, May 2026) and have built 9 portfolio projects on real datasets -- including a Python automation pipeline that generates formatted multi-sheet reports from raw data in a single command, and a Power BI churn dashboard with DAX segmentation across 10,000 customer records.

I am open to relocation and available immediately. My full portfolio is at github.com/Zolow-kuni/data-portfolio. Happy to connect for a quick 15-minute call to discuss fit.

Warm regards,

Subham Joshi
