PROFESSIONAL SUMMARY

Data Analyst with ~1.5 years building **customer-facing operational analytics and SLA monitoring** in a logistics-services environment — pipelines that flagged delivery risks before they became customer escalations, KPI dashboards owned at the leadership level for quarterly business review, and reporting automation that freed analyst capacity for higher-value modelling work. Comfortable across the modern data stack (SQL, **dbt**, PostgreSQL, Python, Power BI, Tableau) with directly relevant **customer-experience analytics depth** — a 9-project portfolio on 1.2M+ real records covering **customer churn-risk modelling (AUC 0.837)**, RFM segmentation across 805K transactions / 5,878 customers, and automated fraud-scoring on 284K credit-card transactions. 🏆 **Google Advanced Data Analytics Professional Certificate** (full 7-of-7 program, May 2026). MBA in Operations Management brings the commercial framing to translate analytics into client-delivery outcomes — a fit for the consulting + data-driven culture at Concentrix Catalyt.

CORE COMPETENCIES

Customer Experience & Journey Analytics

SLA Monitoring & Operational KPIs

Churn Modelling & Customer Retention (AUC 0.84)

RFM & Cohort Segmentation

Advanced SQL & PostgreSQL

BI Dashboarding (Power BI, Tableau)

Python Reporting Automation

Client / Stakeholder Communication

WORK EXPERIENCE

Logistics Integrators Pvt. Ltd. Mar 2025 – Mar 2026

Data Analyst (Management Trainee Program) · Dehradun, India

- Built **SLA-monitoring pipelines** on operational and customer-facing data that gave ops leaders **2–3 days of warning on at-risk shipments** — issues that previously surfaced only after customer escalation, directly analogous to CX SLA-breach prevention work
- Built **customer-journey (start-to-delivery) analytics** that surfaced where shipments stalled in the funnel — findings drove 3 process redesigns and measurably reduced average dwell time, same methodology used in CX journey-mapping engagements
- Owned the **KPI layer used in the quarterly business review** — 10+ metrics across freight operations standardised so leadership and operating teams could finally argue from the same numbers
- Cleaned the data layer feeding leadership dashboards — reconciliation across **3 source systems** ended the recurring “which number is right” debate and rebuilt stakeholder trust in the weekly numbers
- Automated weekly reporting workflows that previously consumed **~8 analyst-hours per cycle** into single-command runs — capacity redirected to higher-value analytics and modelling work

Vrun Minerals Pvt. Ltd. Feb – Jul 2024

Operations Analyst (Intern) · Dehradun, India

- Built reconciled distributor / sales views that surfaced **inventory deviations sales leaders previously couldn’t see** — caught stock-discrepancy patterns that fed corrective restocking decisions
- Hardened daily reconciliation against source-of-truth ledgers — eliminated downstream reporting errors that had been triggering **false stock-out alerts**

SELECTED PROJECTS

SQL & Retail Analysis Pipeline · SQL · SQLite · Python · CTEs · Window Functions [GitHub](#)

Built an ELT pipeline that turned 525K raw retail transactions into a **5,878-customer behavioural model** — outputs covered RFM segmentation, cohort retention, and MoM revenue trends across 41 countries, ready as decision input for retention and pricing teams

Python ELT Automation Pipeline · Python · Pandas · openpyxl · logging [GitHub](#)

Built a **single-command ELT pipeline** taking retail operational data through ingest → clean → validate → transform → publish — produced an audit-ready 5-sheet output with **100% data-quality pass-rate**, replacing a fragile multi-step manual workflow

Customer Churn-Risk Model · R · tidyverse · randomForest · caret · pROC [GitHub](#)

Built a churn-risk model on 7K telco customers that hit **AUC 0.837** on holdout — feature-importance output identified the **top three predictors** retention teams should action first, framed for ongoing decision support rather than a one-off study

Fraud & Anomaly Detection System · Python · Pandas · NumPy · SciPy · scikit-learn [GitHub](#)

Built an **automated risk-scoring pipeline** that processed **284K credit-card transactions** and surfaced 2,838 suspicious records (0.17% fraud rate) — output ranked by risk score, ready for fraud-team review queues without manual triage

EDUCATION

MBA / PGPM — Operations Management, ICAI Business School, Mumbai 2025

Bachelor of Computer Applications (BCA), Shree Guru Ram Rai I.T.S., Dehradun 2022

CERTIFICATIONS

🏆 **Google Advanced Data Analytics Professional Certificate** (full 7-course program, May 2026) · **Mastering dbt (Data Build Tool)** (Udemy, 8h) · **SQL & PostgreSQL Developer** (Udemy, 22h) · IBM Python for Data Science · IBM Data Analysis Using Python — *15 certifications total* · [full list + verification links on Drive →](#)

SKILLS

Languages & Query: SQL (joins, window functions, CTEs, aggregations), PostgreSQL, SQLite, Python (Pandas, NumPy, openpyxl, scikit-learn), R

Data Engineering / Analytics Engineering: dbt (dbt Core), ELT Pipelines, ETL Validation, Data Quality, Data Integrity, Reconciliation, Process Automation

BI & Visualization: Power BI, Tableau, Streamlit, Plotly, MS Excel (Pivot Tables, Modelling)

Statistical / ML: Logistic Regression, Random Forest, Decision Trees, ROC / AUC, Cohort Analysis, RFM Segmentation, Outlier Detection (Z-score, IQR, 3-sigma)

Collaboration: Stakeholder Management, Data Storytelling, RCA / Incident Investigation, Cross-functional Validation
