Re: Product Analyst (Bangalore)

Dear CRED team,

I am applying for Product Analyst. Your JD is skills-based -- SQL, Python and Pandas, Excel modelling, A/B testing principles, communication with non-technical stakeholders -- and that is exactly the substrate I have built over 14 months at Logistics Integrators. I would bring that into your feature-impact measurement and user-cohort work.

I own SQL-based statistical anomaly detection on operational and sales data, build Power BI dashboards tracking 10+ KPIs as the single source of truth, and lead root-cause investigations partnering with 3-5 cross-functional teams.

Shipment journeys have the same funnel logic as user journeys -- conversion, drop-off, turnaround -- and I have measured all three. A/B testing I currently know at the principles level (sample size, statistical significance, experiment design); I am ready to build production fluency. Cohort analysis lives in my hands as freight-cohort comparison; the user-cohort substrate is the same.

I do not have fintech or product-analytics domain depth -- that is the trainable gap. The skills-based JD tells me CRED values demonstrated muscle over labelled experience, and I have the muscle. dbt Fundamentals cert (2026), Python automation of weekly business reviews, and ETL validation discipline are all proof of self-driven ramp.

MBA Operations Management (ICFAI Mumbai 2025), BCA 2022. Dehradun-based, open to Bangalore relocation for CRED.

Best regards,

Subham Joshi
