Hiring Team

Data Analyst

Skeps

India (Remote)

RE: DATA ANALYST - APPLICATION

Skeps is building the analytics layer for B2B POS financing - an inherently data-dense problem where portfolio segmentation, reporting infrastructure, and trend analysis directly shape credit decisions. That is the kind of work I have been doing for the past year, and I would like to bring it to your team.

At Logistics Integrators, I owned the **end-to-end reporting infrastructure** for weekly business reviews: built Power BI dashboards tracking 10+ operational KPIs, established them as the single source of truth across three teams, and built the underlying data models that made month-over-month trend analysis and performance forecasting reliable. The domain was freight - the analytical muscle is identical to portfolio analytics in lending.

Beyond dashboards, I built **statistical analysis and segmentation workflows** in Python (Pandas, NumPy) - conversion and funnel analysis on shipment journeys, regression-ready KPI models, and trend detection that surfaced patterns before they became problems. I also drove the **data quality and ETL validation** layer: reconciliation, cross-system audits, and eliminating discrepancies before they entered management reporting. Clean data in, trustworthy insights out - that discipline matters even more in fintech.

Fintech and lending analytics are new to me as a domain, but the reporting infrastructure you are building maps directly to work I have shipped. I pick up domain context fast and am available for a 15-minute call at your convenience.

Warm regards,

Subham Joshi
