Re: Operations Associate, Apprenticeship (Bengaluru)

Dear Stripe Bengaluru SDC team,

I am applying for the Operations Associate Apprenticeship starting July 2026. I graduated MBA Operations Management from ICFAI Business School (Mumbai) in 2025 -- squarely in the 2025/2026 grad window you have named -- and I would bring 14 months of post-MBA analytics work into the program.

At Logistics Integrators I own weekly Power BI dashboards tracking 10+ freight KPIs, run SQL-based statistical anomaly detection with threshold alerts, and lead root-cause investigations partnering with 3-5 cross-functional teams. The discipline is "decompose before you diagnose" -- the same muscle apprenticeship-era customer troubleshooting will exercise, just on a different substrate.

I have not owned external customer conversations yet -- that is the layer I want to build here. I have the substrate (problem-solving, defensible written English, process documentation, dbt Fundamentals cert) and I am looking for the structured runway Stripe's apprenticeship program provides. A parallel analyst role in another industry would be lateral; this is a deliberate step into payments.

On location: I am based in Dehradun and ready to relocate to Bengaluru for this role. On conversion: I would hope to earn FTE in six months and I am clear that is the program's evaluation, not a guarantee -- tell me what good looks like at Month 5 and I will work backward from there.

I am available IST or APAC shift and ready to start in July 2026.

Best regards,

Subham Joshi
