To: Stripe Verifications team

Re: Verifications Operations Associate (Bengaluru)

Dear Stripe Verifications team,

Your JD asks for SQL plus dashboards as the spine of verifications migrations -- that is what I do daily on freight operations. I would ramp on KYC/KYB; the operating muscle is already there.

At Logistics Integrators I write SQL with window functions and CTEs, own Power BI dashboards tracking 10+ KPIs as the single source of truth for cross-team reporting, and built threshold-based alerting that catches anomalies before they hit SLAs -- the same shape of work as queue management and exception flagging in verifications. I have also led validation and reconciliation specs spanning three teams with ETL audit checkpoints; reporting discrepancies dropped to near-zero. That is the substrate for migration tracking and data integrity at user-record scale.

My stakeholder work has been internal -- ops, sales, finance, vendor liaison -- and external user-facing is the gap. The discipline (defensible data, clear status, follow-through) transfers; the user-interaction layer is what I would build here in the first 30 days.

On the KYC/KYB nice-to-have: I have reviewed freight vendor and distributor documents as an internal compliance proxy, and the document-review pattern is portable. On Hubble and Stripe-internal tooling: trainable; my SQL and Power BI foundation makes the ramp short.

Dehradun-based, open to Bengaluru relocation. MBA Ops 2025 (ICFAI), 1.5 years analytics, dbt Fundamentals cert 2026, IST or APAC shift.

Best regards,

Subham Joshi
