Hiring Team

Data Analyst

Tap Invest

Bangalore, India

RE: DATA ANALYST - APPLICATION

Tap Invest is building the data layer for retail fixed income investing - a product where analytical rigour directly shapes investment decisions and user trust. That is the kind of work I want to do, and the SQL, Python, and Pandas toolkit your team needs is the same one I have been working with daily.

At Logistics Integrators, I built **Python (Pandas) analytics pipelines and SQL-based KPI models** tracking 10+ business metrics across operations. Every week those models produced analytical reports that went directly to leadership and shaped operational decisions - the same discipline a data analyst at a fintech needs to build confidence in product and business data. I also owned the **Power BI dashboard infrastructure** that three teams used as their single source of truth, and designed funnel and conversion analysis that surfaced where operational and revenue leakage was happening.

The work I am most proud of is the **data quality and ETL validation layer** - reconciliation, cross-system audits, eliminating discrepancies before they entered any report. Analytics only works when the underlying data is trustworthy. I understand that constraint from the inside and treat data integrity as a precondition, not an afterthought.

Fixed income and investing are new domains for me, but the analytical workflow is identical to what I have been shipping. I am open to relocating to Bangalore and available for a 15-minute call at your convenience.

Warm regards,

Subham Joshi
