Hiring Team
Solution Focus — AMER
Criteo
Gurgaon, Haryana, India (Hybrid)

Re: Application for Data Analyst, Solution Focus AMER — Gurgaon (Hybrid)

Dear Hiring Team,

I am writing to apply for the **Data Analyst, Solution Focus AMER** role at Criteo. The combination of **customer analytics work and AMER shift coverage** is exactly the intersection I have been preparing for — my profile is explicitly built around late-IST overlap with US working hours, and my technical foundation maps cleanly onto adtech conversion and customer-journey analytics.

My core technical stack is what this role calls for: advanced SQL (CTEs, window functions, PostgreSQL), Python (Pandas, NumPy, scikit-learn), and statistical modelling. My portfolio includes a **churn prediction project on 7,043 Telco customer records** training 3 ML models (Logistic Regression top AUC 0.837, Random Forest 0.824, Decision Tree 0.781), an **RFM segmentation project across 805,549 retail transactions** covering 5,878 customers in 41 countries, and conversion / funnel / drop-off analysis on shipment journey datasets at Logistics Integrators — all directly transferable to advertiser customer-journey analytics.

I have just completed the **Google Advanced Data Analytics Professional Certificate** (May 2026, full 7-course program including Regression Analysis, Machine Learning, and Capstone). On AMER coverage specifically: I am based in Dehradun (IST) and have structured my availability for evening/late-night IST shifts to overlap with North American business hours — my LinkedIn and CV both flag “Americas-shift compatible”, and that has been a deliberate design choice in my job search since early 2026.

I am immediately available and excited to bring this skill set plus AMER coverage to Criteo. I can be reached at joshisubham442@gmail.com.

Sincerely,

Subham Joshi
