Hiring Team

Data Analyst & Operations PM

Foyforyou

Mumbai, India

RE: DATA ANALYST & OPERATIONS PM - APPLICATION

Most companies split the data analyst and operations PM roles. The fact that you have combined them tells me you need someone who thinks in both data and process simultaneously - who can build the reporting layer and then act on what it shows. That is exactly how I have been working.

At Logistics Integrators, I functioned as both the **data analyst and the operational reporting PM** for three teams. I built the SQL dashboards and Python pipelines that tracked 10+ operational KPIs, and I also owned the process improvement work those dashboards enabled - identifying bottlenecks through funnel analysis, partnering with 3-5 cross-functional teams to redesign workflows, and tracking corrective actions through to resolution. The data work and the operations work were never separate; each one informed the other.

My **MBA in Operations Management** from ICFAI Business School gives me the structured business thinking to sit at the operations PM seat, not just the analyst seat. I understand how operational decisions get made, what stakeholders need to act on data, and how to communicate findings in a way that drives action rather than just reporting numbers.

I am open to relocating to Mumbai and available for a 15-minute call to discuss how my background fits the scope of this role.

Warm regards,

Subham Joshi
