Hiring Team

Hypersonix AI

Junior Data Analyst · E-commerce & Retail Intelligence

Dear Hiring Team,

Hypersonix is exactly where I want to work. You sit at the intersection of AI, pricing intelligence, and e-commerce analytics - and that's the same intersection I've been building toward: SQL, Python, BI dashboards, and ML-adjacent work on real data problems. The Junior Data Analyst role matches where I am right now, and the problem domain - retail pricing, demand signals, competitive intelligence - is where my portfolio project work has naturally landed.

In my current role at Logistics Integrators I own the KPI reporting and alerting stack for 180K+ operational orders. I translate business requirements into dashboard outputs, catch anomalies before they hit SLAs, and collaborate with cross-functional teams to investigate and resolve data issues. That's the same loop Hypersonix needs: business requirements → data extraction → analytical output → insight delivery. My **805K-row SQL retail analysis** (RFM segmentation, cohort retention, MoM revenue via LAG()) and a **283K-transaction fraud/anomaly detection system** (Z-score + IQR + risk scoring) both came out of wanting to go deeper on exactly the kind of pattern-hunting work that drives retail intelligence platforms.

On the AI/ML side: I completed all 7 courses of the **Google Advanced Data Analytics Professional Certificate** (May 2026) including regression, classification, and model evaluation - I've built a churn prediction model (Logistic Regression AUC 0.837, Random Forest 0.824) and understand how to validate model outputs and surface data quality issues before they pollute downstream models. That puts me in a position to work productively alongside Hypersonix's data science teams from day one.

I'm remote-first, self-directed, and an immediate joiner. I'd love to spend 15 minutes walking through how my project work maps to what your team is building. Would next week work for a quick call?

Warm regards,

Subham Joshi
