KPMG India

Data Analyst Fresher - Gurugram

Dear Hiring Team,

I'm applying for the Data Analyst role at KPMG. The position - Power BI dashboards, Excel reporting, data accuracy, and audit support analytics - is a direct match for the work I've been doing and the professional environment I'm actively targeting.

In my current role at Logistics Integrators Pvt. Ltd. (Management Trainee Program, Mar 2025 - Mar 2026), I own the reporting and analytics stack: **Power BI KPI dashboards** tracking 10+ business metrics, **advanced Excel models** (pivot tables, VLOOKUP, conditional formatting) for operational performance tracking, and pre-reporting validation workflows ensuring data accuracy across 180K+ records. I also maintain structured audit logs and enforce documentation standards on every reporting cycle - habits that translate directly into KPMG's governance-heavy, client-facing analytics environment.

My portfolio reinforces this: a **financial data integrity checker** (10-rule engine, 700 Microsoft financial records, 10/10 rules passed, zero false negatives) and a **Python MIS automation pipeline** (5-sheet Excel report with audit logging, single-command execution) demonstrate both the accuracy mindset and the automation efficiency that a Big 4 analytics team expects.

My **MBA in Operations Management** (ICFAI Business School, 2025) provides the governance, risk, and process framing that KPMG's consulting and advisory analytics work requires - I understand the "why" behind data quality, not just the how. I am an immediate joiner and open to relocate to Gurugram.

Happy to share my portfolio or connect for a short introductory call - thank you for your consideration.

Yours sincerely,

Subham Joshi
