Hiring Team

Orange Business

Mumbai, India

Re: Specialist SCTC - Data & AI

I am applying for the Specialist SCTC Data & AI role at Orange Business. Supply chain analytics is not a stretch for me -- it is where I built my career. At **Logistics Integrators Pvt. Ltd.**, I spent a year doing precisely what this role describes: building Power BI dashboards for operational visibility, applying anomaly detection to surface supply chain risks before they impacted SLAs, running advanced SQL queries and Python pipelines on logistics data, and driving automation to reduce manual reporting effort.

Three things I bring that are directly relevant to SCTC operations:

1. Supply chain domain + analytics stack. Power BI (DAX, data models), SQL (window functions, CTEs, optimization), Python (Pandas, NumPy, Scikit-learn), and dbt pipelines are my daily tools -- applied to freight operations, inventory tracking, and operational KPI governance. The **KPI Dashboard project** in my portfolio tracks 6 supply chain KPIs across 180,519 real orders with automated alerting -- the same architecture this role builds for SCTC.

2. AI-enabled workflow automation. I built **career-ops** -- a production system using Claude (GenAI) + Python that automates a 200+ record business pipeline daily. This is the AI-driven digital transformation mindset Orange wants to promote within SCTC teams.

3. RCA and CAPA discipline. At Logistics Integrators, I led root-cause investigations on performance gaps and documented corrective action plans -- the continuous improvement and CAPA tracking explicitly listed in your key responsibilities.

Open to relocate to Mumbai. Portfolio: github.com/Zolow-kuni/data-portfolio. Happy to connect for a quick call.

Warm regards,

Subham Joshi
