Re: Data Scientist - Collection Insights & Analytics Track

I am applying specifically for the **Collection Insights & Analytics** focus area. The requirement -- 0 to 2 years, Power BI, advanced SQL, DAX, Python data wrangling -- maps directly to what I do.

At **Logistics Integrators Pvt. Ltd.**, I owned Power BI dashboards tracking 10+ KPIs with data models pulling from multiple tables, wrote DAX measures and calculated columns for performance monitoring, and wrote advanced SQL (window functions, CTEs, joins) on operational datasets. I also debugged broken reports and data pipeline issues -- which is specifically called out in your JD. In my portfolio, I built a 3-page Power BI churn dashboard with DAX segmentation across 10,000 customer records and a SQL suite with 15 advanced queries on 805,549 rows including LAG(), cohort retention, and RFM segmentation.

Lending is a new domain for me -- I will say that clearly. But the Collection Insights track is fundamentally about dashboards, SQL, and Python data wrangling -- not credit modelling. That work I can do from day one. The Google Advanced Data Analytics Professional Certificate (7/7, May 2026) covers statistical analysis and the Python foundations needed for the role.

Portfolio: github.com/Zolow-kuni/data-portfolio. Open to relocate to Mumbai. Happy to connect for a quick 15-minute call.

Warm regards,

Subham Joshi
