## RE: GRADUATE OPERATIONS MANAGER - APPLICATION

Your posting names "loves working with data" and "natural curiosity" before it names any tool - and that ordering is exactly how I'd describe my own approach to operations work. I didn't wait for a fintech job to engage with fraud analysis: on my own time, I built a **fraud and anomaly detection system**, applying statistical risk-scoring to 283,726 real European credit-card transactions and flagging 2,838 suspicious records at a 0.17% rate matching real-world prevalence. That project is the most direct, literal answer I can give to "interest in the financial industry" - it's something I've already done, not something I'm hoping to start doing.

That same instinct - go find the root cause, bring the right people along, ship the fix - is how I've operated at Logistics Integrators for the past year and a half. I **led root-cause investigations on recurring SLA breaches, partnering with 3-5 cross-functional teams** to validate findings and turn them into corrective action, while owning the weekly KPI dashboards that kept everyone working from the same numbers. SQL and Python are tools I use daily (window functions, CTEs, Pandas, NumPy) - comfortably ahead of where your "nice-to-have" line sits.

I recognize the title reads "Manager" while the requirements describe a graduate-level seat - I read that as Revolut's naming convention, and the requirements as the real description of the role, which is squarely where my ~1.5 years of fast-paced operations experience sits. I'd welcome the chance to talk through the fraud-detection project and how that same self-driven curiosity would show up in this role.

Warm regards,

**Subham Joshi**
