Hiring Team

Scoutit

Data Analyst - Delhi NCR

Dear Hiring Team,

I applied for the Data Analyst role at Scoutit earlier this year and want to reaffirm my interest - the role is a direct match for what I do and where I'm heading. Your platform connects businesses with freelance talent, which means the data Scoutit generates (platform utilization, conversion funnels, user segments, matching performance) is exactly the kind of business analytics that I've been building toward.

The tool stack you require - **SQL, Python, Power BI, Tableau, and Excel** - is my daily stack. At Logistics Integrators, I own the end-to-end analytics loop: SQL-based data extraction on 180K+ operational records, Python (Pandas) ETL pipelines, and Power BI dashboards tracking 10+ KPIs for cross-functional stakeholders. I've also built: an **805K-row SQL retail analysis** featuring cohort retention, RFM segmentation, and MoM revenue via window functions; a **Power BI churn dashboard** (DAX, Power Query, 10K customer records); and a full **Streamlit KPI dashboard** on 180,519 supply chain orders.

Beyond the tools, I have the business analysis layer: my **MBA in Operations Management** (ICFAI Business School, 2025) means I don't just pull data - I frame it as a business question, identify the decision it needs to support, and deliver the output in a format that stakeholders can actually act on. That's the analyst Scoutit needs as it scales its data function.

I'm an immediate joiner and open to relocate to Delhi. Happy to do a quick 15-minute call to walk through my work - portfolio at github.com/Zolow-kuni/data-portfolio.

Warm regards,

Subham Joshi
