Re: Supply Chain Analyst - Application (Job ID R0028030)

I am applying for the Supply Chain Analyst role at Solenis. Supply chain analytics is not a stretch for me -- it is my primary domain. At **Logistics Integrators Pvt. Ltd.**, I spent a year analyzing inventory, logistics performance, and supply chain KPIs (inventory turnover, on-time delivery, lead times) using the exact stack your JD requires: Python (Pandas, NumPy, SciPy), SQL, and Power BI.

Concretely: I built statistical anomaly detection on supply performance datasets to flag deviations before they impacted SLAs, owned Power BI dashboards tracking 10+ KPIs for senior leadership, and automated recurring reporting pipelines in Python -- delivering scalable analytical solutions the team relied on daily. In my portfolio, the **Supply Chain KPI Dashboard** (180,519 real orders, 6 KPIs, automated alerting) and the **Sales & Inventory Trend Analyzer** (27 seasonal anomalies detected, MoM growth analysis) demonstrate this directly. On the R side, I have built regression and random forest models with AUC 0.837 -- the statistical modelling the JD asks for.

The forecasting depth (ARIMA, demand optimization) in your JD is an area I am actively developing -- I am honest about that. But the analytical foundation -- Python data manipulation, statistical analysis, supply chain KPI reporting, and process automation -- is already in place and operational.

20 days to the application deadline, but I am applying today because this role matches my background more precisely than anything else I have seen. Portfolio: github.com/Zolow-kuni/data-portfolio. Happy to connect for a 15-minute call.

Warm regards,

Subham Joshi
