Re: Product Management Operations (AI-Augmented) - Application

I am applying for the Product Management Operations role at Tata Communications. The JD describes exactly what I have been building toward: using AI tools to improve business reporting efficiency, monitoring market trends, supporting cross-functional teams with data and insights, and identifying opportunities for further AI adoption in operations.

At **Logistics Integrators Pvt. Ltd.**, I owned automated and manual reporting pipelines for senior management, applied AI-augmented analysis to surface operational issues proactively, and collaborated with 3-5 cross-functional teams to align on process improvements. Outside of work, I built **career-ops** -- a production AI system using Claude (generative AI), Node.js, and Python that automates an entire job-search pipeline: AI-driven JD evaluation via prompt engineering, automated PDF generation, Gmail API sync, and a 200+ application tracker. This is not a course project -- it runs daily and manages real operations. It is the clearest proof I can offer that I understand how to adopt generative AI tools responsibly to improve business workflows.

On the analytical side: I hold the **Google Advanced Data Analytics Professional Certificate** (7/7 courses, May 2026), have built 9 portfolio projects covering market trend analysis, KPI dashboards, and automated reporting pipelines, and bring hands-on Python and Power BI experience that maps directly to the automated reporting and performance metrics requirements in this role.

Telecom is a new domain for me -- I will say that upfront. But the role is about product analytics, AI tool adoption, and process operations, not telecom-specific expertise. I learn domains fast and bring the measurement-and-automation foundation needed to be productive immediately.

Portfolio: github.com/Zolow-kuni/data-portfolio. Happy to connect for a quick 15-minute call.

Warm regards,

Subham Joshi
