## Hiring Team

Team Teknik Solutions

Mumbai, India

## Re: AI Associate - Digital & AI Transformation

I am applying for the AI Associate role at Team Teknik Solutions. The position aligns closely with work I am already doing: coordinating AI tool adoption, building programme trackers, documenting workflows, and translating AI capabilities into processes that non-technical stakeholders can follow and repeat.

At Logistics Integrators, I owned **MIS dashboards and cross-functional reporting** across operations, sales, finance, and logistics - gathering requirements from five business teams simultaneously, validating findings, and communicating actions to senior management. That direct exposure to stakeholder coordination and programme tracking is exactly what the AI Associate role describes.

My most relevant proof point is a personal project: **career-ops**, an AI-powered operations pipeline I built and customised on top of Claude (Anthropic). It manages 370+ job applications, syncs Gmail, generates tailored PDF CVs, and evaluates job descriptions against a multi-dimension scoring rubric - entirely driven by YAML-config workflows and LLM prompts I designed, tested, and documented for reproducibility. I am a **daily, power user of Claude, ChatGPT, and AI automation tooling** - which means I can support training delivery, collect meaningful feedback on tool outputs, and flag adoption friction in a way that a first-time user simply cannot.

I hold an **MBA in Operations Management (ICFAI Business School, 2025)** - the JD lists it as an added advantage - alongside a Google Advanced Data Analytics Professional Certificate (7-of-7, May 2026) and hands-on skills in Excel, Python, Power BI, and process documentation. I am an **immediate joiner** and happy to relocate to Mumbai.

I would welcome a conversation about how I can contribute to Team Teknik's AI transformation programmes. Happy to connect for a quick 15-minute call at your convenience.

Warm regards,

**Subham Joshi**
