High-Growth Fintech Startup (via Unnati)
Mumbai, India

Re: Data Analyst — SQL | Cutshort Application

Your JD asks for someone who can own data availability, build BI dashboards in Power BI and Metabase, write optimised SQL, and deliver management-ready MIS reports. That is exactly what I have been doing.

At **Logistics Integrators Pvt. Ltd.**, I owned the weekly Power BI dashboard tracking 10+ KPIs across freight operations — built from scratch, maintained as the single source of truth for three to five cross-functional teams, and refreshed every week without fail. I ran SQL-based anomaly detection on operational datasets to surface outliers before they hit SLAs, and automated recurring reports in Python to cut manual effort on business reviews. The work was end-to-end: data ingestion, ETL validation, dashboard delivery, stakeholder communication.

My portfolio reinforces this directly. **Project 5** is a 15-query SQL analysis on an 805,000-row SQLite database covering window functions, CTEs, RFM segmentation, cohort retention, and MoM revenue growth — the exact query patterns your role requires. **Project 6** is a 3-page Power BI dashboard with DAX measures on 10,000 bank customer records, tracking churn across demographics and balance segments. **Project 7** is an automated pipeline that produces a 5-sheet formatted Excel MIS report from a single command, with a 100% data quality score. All three are live on GitHub with full code and documented outputs.

I have not worked in fintech specifically, but your business — SME lending, 2 million customers, BI-driven operations — maps directly to the analytics patterns I know: funnel analysis, MIS delivery to management, and ensuring data is available in the right shape for the right stakeholder. I learn domains fast; I already know the tools.

I am open to Mumbai remote and available immediately. I would welcome a conversation to show you the work directly.

Warm regards,

Subham Joshi
