Data QA Hiring Team

Data QA Associate

YipitData

India (Remote)

RE: DATA QA ASSOCIATE - APPLICATION

YipitData's product turns billions of raw alternative data points into intelligence that moves capital. The integrity of that signal depends entirely on what happens before the analysis - the cleaning, the labeling, the anomaly catch. That is the work I want to do, and it is the work I have been doing.

At Logistics Integrators, I built **SQL and Python pipelines to validate, clean, and flag data quality exceptions** across operational datasets - monitoring for sudden spikes and drops, isolating root causes, and ensuring nothing broken made it into a business report. I also built a **Fraud and Anomaly Detection System** on 283,726 real credit card transactions: Z-score, IQR, and rule-based risk scoring that flagged 2,838 suspicious records at a 0.17% fraud rate. Identifying what does not belong in a dataset - at speed and at scale - is exactly what your e-commerce receipt QA pipeline needs.

The work I am most precise about is validation: my **Financial Data Integrity Checker** ran 10 rules across real financial records, caught 14 outliers via 3-sigma detection, and scored 91-100% completeness per column. **100% data quality score. Zero misses.** That standard of accuracy is not situational for me - it is the baseline.

I am fully remote-ready on IST 8am-5pm, comfortable with high-volume repetitive work, and available to start immediately. Happy to connect for a quick 15-minute call.

Warm regards,

Subham Joshi
